How can I get all the JARs for the latest OpenJDK 2.6.X so that I can use it in a new Java Project?

Thanks in advance

You can download it on <https://jar-download.com/online-maven-download-tool.php> by entering the Maven POM

```
<dependency>
  <groupId>com.github.galigator.openllet</groupId>
  <artifactId>openllet-owlapi</artifactId>
  <version>2.6.2</version>
</dependency>
```
